

BIM its more about information and people than 3D modelling

Justin Morris

Ardent
Architects

Introduction

- This session is about ideas, it is not instructional
- Who am I
- What's the IM in BIM
- What's in it for me (you)
- What are we going to cover
 - Resources : Who you need
 - What you need to know (ie, some geeky technical stuff)
 - How do you implement it
 - How do you manage it
 - How do you maintain it
- **Some other interesting stuff**

Whats wrong with this picture

- Minimal implementation of Revit (that guy in the corner has a copy)
 - We only use revit on Wednesdays
 - We only use revit on jobs larger than \$500k and less than \$5m
 - Oh if you need it quickly we'll have to do it in Autocad
 - Can you back save it as we are still using Revit 2010
 - Outsourcing of Revit modelling
 - Revit "experts" (just because you can model.....)
 - Lack of advanced training
- 

BIM Culture

(it's not a new flavour of yoghurt)

- Needs to be lead from the top
 - The top needs to know what they're talking about
 - The team needs a vision as to the destination
 - The team needs involvement
 - Getting a trainer in for 3 days is not "job done"
 - On-going dissemination of learning and knowledge
 - Tiers of skill in the office should be minimised over time
 - BIM is like hunting
 - Learning new skills is not beneath management
-

Information

- Is power
- Is data
- Can be:
 - contained in models
 - Linked to models
 - referenced by models
 - a database
 - a spread sheet
 - a text file

What does information look like?

- In excel it is a spread sheet with element and type tabs
- Windows 64bit & Excel 2010

Keys / Types

608639	134191		12589	556616				685763	694	2.15	0	

How to we get it out? (Excel)

- Start by creating an existing blank excel document
- Don't use "File Data Source"
- ODBC Open Database Connectivity, is the type of file exported
- DSN Data Source Name, is the connector created between Revit and the Data Source

Keep a blank copy of the excel file to paste over the top before each export

What does information look like?

- In access it is a database with keys and tables
- Keys store common information
- Tables store instance information

614248	820/2150	Existing	NEW CONSTR			611855	694	2150	197

You can then edit information in the database

Note the existing door mark

You can alter information before it is imported as well

The doors properties are changed

Hints

Excel

- Only put relevant data in the models or schedules
- Don't save DSN files to the network
- Keep a blank copy of the spread sheet
- Do any workings on newly created tabs
- Don't use the Revit DB Link with Excel

Access

- Only put relevant data in the models or schedules
 - Learn how to write reports
 - Learn how to write an interface (forms)
 - Research other reporting tools (crystal)
 - Save and close the database before importing it
- 

Great but what do we do with it now?

- Feasibility Studies
- Project costings
- Renumbering of elements
- Project Scoping
- Asset Management
 - Track delivery and installation of furniture and joinery
 - Track equipment and appliances
- Facilities Management
 - How much carpet & when was it installed on each level in each building
- Furniture, Joinery ordering – costing
- Distillation
 - Report on number of existing people and where they are
 - Report per stage of refurbishment of each floor where people are
 - Provide rental areas per department
 - Measure m² per person

Prove it: Rent Capability

Project Name: Sydney Site Whole Site Benchmark
 Date: 2011.09.13
 Revision: 0

Project Assumptions / Estimate Constraints:
 Financial data has been used from Decides report and future vehicle numbers from franchise.
 The project construction cost includes a \$2.5m for the sale of the residential block.
 The construction cost is an estimate only and does not replace the requirement of a Quantity Surveyors Report.

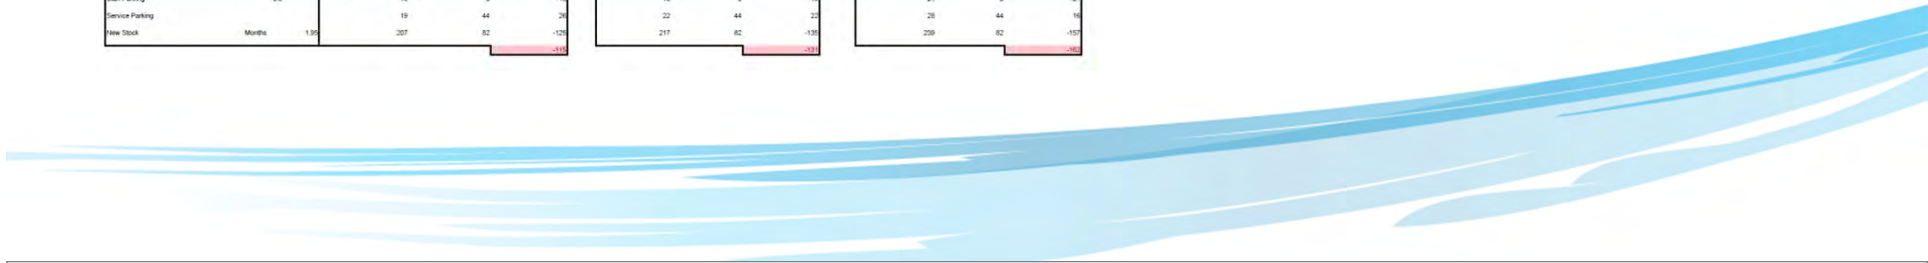

Rent Capability Analysis Estimate

Department	Rent Capacity	Increase over existing	Rent Capacity	Growth over year 1	Rent Capacity	Growth over year 2
New Cars	148	39%	12%	5%	9%	12%
Used Cars	148	39%	12%	5%	9%	12%
Service Department	148	39%	12%	5%	9%	12%
Total Parking required on site	148	39%	12%	5%	9%	12%

Department	Year 1 (2013)	Year 2 (2014)	Year 5 (2017)
New Cars	Volume: 106 Platue (%): 100% Rent (%): 0.0%	Volume: 111 Platue (%): 100% Rent (%): 0.0%	Volume: 123 Platue (%): 100% Rent (%): 0.0%
Used Cars	Volume: 106 Platue (%): 100% Rent (%): 0.0%	Volume: 111 Platue (%): 100% Rent (%): 0.0%	Volume: 123 Platue (%): 100% Rent (%): 0.0%

And used them estimate a project cost

Something Simple: Keynotes

- Thoroughly underutilised
 - Commonly misused
 - Cleaner drawings
 - Usually managed with the text file
 - Can be opened in Excel
 - TXT file is formatted as a CSV file Comma Separated Values
 - Can be preallocated and managed easily
 - Preallocate paint1, paint2, carpet1, carpet2
 - Allows for completion of documentation without all decisions made
-

Keynotes by sheet

But easier in excel

The screenshot shows a Microsoft Excel spreadsheet with a list of building components. The table has four columns: 'ID', 'A', 'B', and 'C'. The 'ID' column contains numerical values, and the 'A' column contains the component names. The 'B' and 'C' columns are empty. The rows are numbered 1 through 23, with the last row being 99. The component names are: 1 SITE/LANDSCAPE, 2 STRUCTURE, 3 WALL COMPONENT, 4 WALL TYPES, 5 DOOR, 6 WINDOW, 7 ROOF, 8 CLADDING, 9 FLOOR, 10 GLAZING, 11 LINING, 12 FINISH, 13 STAIRS, 14 RAILING, 15 HYDRAULIC, 16 ELECTRICAL, 17 MECHANICAL, 18 SAFETY EQUIPMENT, 19 JOINERY, 20 APPLIANCE, 21 FIRE EQUIPMENT, 22 USER KEY NOTE, and 99 MISCELLANEOUS. The spreadsheet is titled 'KEYNOTE_BAYSIDE.xlsx' and is open in Microsoft Excel.

The API

- Isn't a thing of myth or to be afraid of
 - Doesn't only have to be used in large offices
 - Can do amazing things
 - Can reduce mundane and monotonous tasks
- 

The API: What can it do for us?

- Furniture and joinery checking and budget
 - Area or room costings on the fly
 - Project feasibilities live
 - Corporate identity costings
 - Check different categories against each other
 - No. beds against oxygen outlets, car parks, toilets
 - No. units/bedrooms against parking requirements
 - Alter family properties
 - HTML reporting
- 

The API: But who and how?

- Programing is not that difficult to learn
 - Have two people learn it so that they can work through issues together
 - Join the Autodesk Developers Network
 - If your not in it for the long term hire a contract programmer with experience in the Api
 - Agree a fixed price with the programmer, with payment on completion
 - Beware of using an external developer
- 

Case Study: Orica Headquarters Melbourne

- 10 floors to be refurbished
- Rental of another 2 stories to distil management into
- 4 stages of distillation

Case Study: Orica Headquarters Melbourne

Plan

- Building modelled in Revit
- Each distillation stage given a phase
- Staff put into revit as objects (but not objectified)
- All workstations given numbers
- All staff with staff numbers at desks

Case Study: Orica Headquarters Melbourne

Deliverables

- Staged plans for each floor with all staff shown and scheduled
 - Excel reports showing all floors and stages
 - Client could assess seating arrangements
 - Client could make decisions on seating numbers
 - Client could clearly see clashes in seating numbers
 - Plans for the removalists and deliveries
 - Plans for data and telco contractors for phone numbers
 - Furniture and joinery report for ordering and audit
 - Department area plans and reports for rent apportioning
 - Full reporting out of Access with customised reports
-

Culture Change: Management

- You don't need to know how fillet a fish to run a restaurant
- Don't let BIM be your emperors new clothes
- The days of not having to learn anything more now that you're the man; are over
- Yes it will be hard to start with, and then it will get harder

Culture Change: The Whole Team

- Staff need to know what is expected
 - Staff need to be supported
 - Training is ongoing
 - Failure is not an option
 - 2D date of expiration
- 

Culture Change: Training

- In house training is great team building
 - Having one person get good at something and then train everybody else is rewarding
 - Schedule training on a set regular basis
 - Cover many different packages, areas and theory's
 - You can teach junior staff advanced ideas
 - You can teach senior people very technical things
 - Not everyone has to retain everything
 - Measure it by whether a director has to call a junior in to simply navigate the Revit model of their design
- 

Culture Change: People

- Some people are not suited to this brave new world
 - Dissidents can undermine efforts
 - 2D is not quicker or easier
 - It is not faster to key the figures in
 - BIM is exciting; employ excited staff
 - Preaching to the choir
 - People who do not want to change and or do not want to learn and embrace BIM.....
- 

Culture Change: What makes an excellent BIM'er

- Staff who have excellent problem solving skills
- Good at mathematics and or puzzles
- Can concentrate for long periods
- Don't give up, find challenges in setbacks
- Are highly adaptable

Number 1: The type of person who when there is an issue on Friday afternoon, comes in Monday morning with the solution because they couldn't stand not knowing the answer and found figuring it out fun.

Yes they are hard to find.

Culture Change: New versions

- The moment you have the new features list distribute it with comments
- New versions should come with anticipation and excitement, it should be like a new album release
- New enhancements that allow for BIM expansion should be researched to stay ahead of the curve
- Get in to beta testing, find out what is coming months in advance

Other Flavours: MEP, Structural

- Play the big brother role (as in mentoring)
- Encourage your secondary consultants to change
- Have people in your team who can use the other flavours
- Review your consultants models and offer feedback
- Pass on interesting papers, add-ons, suggestions
- Pre prepare them for when you are going to upgrade
- BIM loses most of its advantages when your sub consultants are hopeless at it
 - Drafted member schedules in Revit???

But why?? We are moderately happy the way we are.....

- More fees
 - Additional scopes of work
 - Control of the crucial information in projects
 - Take back some ground lost to other professions
 - Added value to client
 - Ongoing work on multisite BIM information management
 - Internal QA becomes less laborious
 - Reduction in labour hours
 - Consistency
 - Reduced bottlenecks
-
